Practice Exam 04

70 practice questions | Printable Practice Exam

Instructions	Select the single best answer for each question. An answer key with explanations begins after the question section.

PART A - QUESTIONS

1.

Scenario

A resident is wearing a hearing aid before a scheduled shower.

What should the nurse aide do?

A) Turn it off, remove it as directed, and store it in the labeled dry container
B) Cover it with a wet washcloth and leave it in the resident's ear
C) Place it in a cup of water until the shower is finished
D) Put it on the roommate's bedside table for temporary safekeeping

2.

Scenario

A resident has a dialysis fistula in the left arm, and a blood pressure measurement is requested.

What should the nurse aide do?

A) Place the cuff directly over the fistula for the clearest reading
B) Use the left forearm because it is below the fistula
C) Confirm the approved arm and avoid pressure on the fistula arm
D) Take the pressure on both arms and average the results

3.

Which technique is appropriate during perineal care for an uncircumcised male resident?

A) Gently retract as directed, cleanse and rinse, then return the foreskin to its normal position
B) Leave the foreskin retracted after cleaning so the area can air-dry beneath a loose towel
C) Pull the foreskin back forcefully even when the resident reports pain
D) Apply powder under the foreskin before returning it to position

4.

Scenario

A resident requests a clothing protector during meals because food sometimes spills onto a favorite shirt.

What should the nurse aide do?

A) Tie a bath towel tightly around the resident's neck without asking
B) Offer the approved protector, apply it comfortably, and remove it after the meal
C) Require every resident at the table to wear the same protector
D) Place the protector under the tray where it cannot protect clothing

5.

Scenario

A resident smiles while talking about many years spent working as a school librarian.

What is the nurse aide's best response?

A) Change the subject because past employment is not part of care
B) Correct small details in the story whenever dates seem uncertain
C) Ask the family to provide a written employment history instead
D) Show interest and invite the resident to share more if desired

6.

Scenario

A transmission-precaution sign on a resident's door is damaged and cannot be read.

What should the nurse aide do before entering for care?

A) Confirm the required precautions with the nurse and obtain the correct protective equipment
B) Enter without protection because the sign is unreadable
C) Copy the protective equipment used for the resident next door
D) Ask the resident to choose which protective equipment the aide should wear

7.

Which fingers should a nurse aide generally use to palpate a radial pulse?

A) The thumb alone because it has the strongest sensation and can press firmly against the artery
B) The little finger pressed firmly against the wrist
C) All five fingertips wrapped tightly around the wrist
D) The pads of two or three fingers, avoiding use of the thumb

8.

Scenario

A resident with sensitive skin has a labeled non-soap cleanser listed in the care plan for bathing.

What should the nurse aide do?

A) Replace it with the strongest facility soap for a deeper cleaning
B) Use the resident's labeled cleanser according to the care directions
C) Mix it with another resident's cleanser to reduce waste
D) Skip cleansing the skin because only regular soap is effective

9.

Scenario

A coworker says a resident with HIV should receive less hands-on care than other residents.

What should the nurse aide do?

A) Agree to avoid the resident until the next shift arrives
B) Ask the resident to complete all personal care without assistance
C) Provide assigned care using appropriate precautions and report the discriminatory statement
D) Transfer the resident's supplies to the hallway to limit staff contact

10.

Scenario

A resident becomes frustrated because rehabilitation progress feels slower than expected.

What is the nurse aide's best response?

A) Acknowledge the frustration, recognize specific progress, and report persistent hopelessness
B) Promise that full recovery will occur before the resident goes home
C) Compare the resident with someone who improved more quickly
D) Say that discussing frustration will interfere with rehabilitation

11.

What should a nurse aide do if an automated blood pressure device repeatedly gives an error message despite correct positioning?

A) Estimate the pressure from the resident's pulse strength
B) Record the last value obtained for another resident
C) Report that a reliable reading could not be obtained and follow the equipment procedure
D) Enter a normal value so the record is complete and the device can be checked later

12.

Scenario

A resident with limited hand movement has been trained to use a foot-operated call switch.

How should the nurse aide support this independence?

A) Replace the foot switch with a standard hand control
B) Keep the switch under the bed until the resident requests it
C) Ask the roommate to activate the call system for the resident whenever help is needed during the shift
D) Position the switch at the trained foot and verify that the resident can activate it

13.

Which action is appropriate when providing routine fingernail care allowed by the care plan?

A) Clean gently, dry the hands, and file rough edges without cutting the cuticles
B) Cut the cuticles deeply so the nail surface looks larger
C) Use another resident's nail file after wiping it on a towel
D) Leave moisture beneath the nails to soften them throughout the day

14.

Scenario

A resident with low vision can select meals independently when using a magnifier and a well-lit menu.

What should the nurse aide do?

A) Choose the meal based on what the resident ate yesterday and mark the selection without discussing it
B) Read only the least expensive selections aloud
C) Position the magnifier and lighting, then allow time for the resident to choose
D) Ask a tablemate to select the resident's food

15.

Scenario

A resident with hearing loss is having difficulty understanding speech in a noisy recreation room.

Which approach is best?

A) Shout from behind the resident so every word is louder
B) Move to a quieter area, face the resident, and speak clearly at a normal pace
C) Cover the mouth to reduce distracting facial movements
D) Repeat the same sentence rapidly without changing the environment or moving closer to the resident

16.

Scenario

A pressure-relieving mattress sounds a low-pressure alarm while a resident is lying on it.

What should the nurse aide do?

A) Silence the alarm and leave the mattress turned off
B) Add folded blankets beneath the resident to replace the mattress function
C) Disconnect the alarm so the resident can continue sleeping
D) Keep the resident safe, check only permitted visible connections, and notify the nurse

17.

Scenario

A resident's ostomy pouch is filling and the care plan assigns the nurse aide to empty it.

What should the nurse aide do?

A) Wait until the pouch is completely full and begins to leak
B) Empty it using the trained procedure, measure as directed, and clean the outlet
C) Remove the entire pouching system and replace the skin barrier independently
D) Add tissue inside the pouch to absorb the contents

18.

Which action is appropriate when emptying a urinary drainage bag?

A) Rest the drainage spout against the measuring container
B) Keep the spout from touching the container, close it securely, and perform hand hygiene
C) Raise the bag above the bladder so it drains more quickly and squeeze the tubing toward the outlet
D) Leave the clamp open after the measurement is recorded

19.

Scenario

A resident who tires easily wants to wash the hair while remaining in bed. The care plan permits an in-bed shampoo.

What should the nurse aide do?

A) Pour water onto the pillow without using protective equipment
B) Ask the resident to bend the neck backward without support
C) Support the head, protect the bed and eyes, and use the planned shampoo method
D) Use dry powder from another resident instead of the assigned supplies and brush it through the hair

20.

Scenario

A resident has new thick yellow drainage from one eye during morning care.

What should the nurse aide do?

A) Wipe both eyes with the same cloth and return it to the washbasin
B) Apply antibiotic ointment borrowed from another resident's bedside drawer
C) Perform hand hygiene, use appropriate barriers, keep linens separate, and report the drainage
D) Delay reporting until the resident says that vision has become difficult

21.

Scenario

A resident develops a new widespread rash during morning care.

What should the nurse aide do?

A) Describe the rash and report it promptly without applying an unapproved product
B) Cover the rash with scented lotion and reassess next week
C) Diagnose the cause from the resident's laundry detergent
D) Scrub the skin firmly until the redness fades

22.

Scenario

A resident wants the beard washed but cannot safely go to the shower room. The care plan permits bedside grooming.

What should the nurse aide do?

A) Cut the beard short so it is easier to clean
B) Protect clothing and bedding, wash gently with approved products, and dry thoroughly
C) Use very hot water so the beard dries faster
D) Skip beard care because the resident cannot reach the shower

23.

Which action is appropriate when assisting with a clean-catch urine specimen?

A) Touch the inside of the container with a gloved finger to hold it steady while the resident begins urinating
B) Collect the first urine that enters the toilet before cleansing
C) Add water if the required amount is not obtained
D) Follow cleansing directions and collect the midstream urine without touching the container interior

24.

Scenario

A resident asks to contact the long-term-care ombudsman privately.

What should the nurse aide do?

A) Help the resident obtain private access to the ombudsman contact process
B) Require the resident to explain the complaint before providing contact information
C) Tell the resident that only family members may contact an ombudsman
D) Delay the request until the resident agrees not to criticize the facility

25.

Scenario

Before a planned procedure, a resident begins breathing rapidly and says, "I feel panicked."

What is the nurse aide's best response?

A) Leave the resident alone until the feeling passes
B) Say that panic is a choice and should stop immediately before the procedure can continue
C) Stay calm, reduce stimulation, use the planned coping approach, and notify the nurse
D) Promise that nothing uncomfortable can happen during the procedure

26.

Scenario

Body fluid splashes onto a nurse aide's uniform during care.

What should the nurse aide do?

A) Continue wearing the uniform because the fluid has dried
B) Cover the wet area with a resident towel for the rest of the shift and continue directly to the next resident
C) Spray perfume on the uniform and continue to the next resident
D) Leave the task safely, remove the soiled garment as directed, clean the hands, and report the exposure

27.

Scenario

A resident without a positioning restriction is ready to eat lunch in bed.

How should the nurse aide prepare the resident?

A) Leave the resident flat and place the tray beside the pillow
B) Raise only the knees while keeping the upper body flat
C) Position the resident upright and place the tray and utensils within safe reach
D) Put the tray across the room so the resident must stand to reach it

28.

Which technique is appropriate when using a disposable razor for a resident whose care plan permits it?

A) Shave dry skin against the direction of hair growth with repeated strokes over the same area
B) Share the razor after rinsing it in warm water
C) Press firmly over skin folds to remove every hair
D) Soften the hair, protect the skin, and use gentle strokes as directed

29.

Scenario

The assignment board lists tasks for every resident except one person on the unit.

What should the nurse aide do?

A) Assume the omitted resident needs no care during the shift
B) Notify the charge nurse and clarify who is responsible before care is missed
C) Divide the omitted resident's care among visitors
D) Add the resident to another aide's assignment without telling anyone and assume the change will be noticed

30.

Scenario

Before scheduling an optional salon service, a resident asks how much it will cost.

What should the nurse aide do?

A) Help the resident obtain the approved fee information before agreeing to the service
B) Schedule the service first and explain the price after it is completed
C) Estimate the cost from memory and guarantee that the amount is correct
D) Tell the resident that optional service charges cannot be discussed

31.

Scenario

A resident repeatedly apologizes for needing help with routine care.

What is the nurse aide's best response?

A) Agree that the care takes too much staff time
B) Reassure the resident respectfully, invite choices, and report persistent distress
C) Tell the resident to stop apologizing before care can continue
D) Ask the roommate to explain why assistance is necessary

32.

Scenario

A resident has learned to use a one-handed toothpaste dispenser during morning care.

How should the nurse aide help?

A) Squeeze toothpaste onto the brush before offering the dispenser and store the device where the resident cannot reach it
B) Remove the dispenser because it makes the routine slower
C) Ask another resident to operate the dispenser
D) Set up the device as planned and allow the resident to use it with needed supervision

33.

Scenario

After a resident dies, a neighbor asks the nurse aide to disclose the cause of death.

What should the nurse aide do?

A) Keep the information confidential and refer the question through an authorized channel
B) Share the cause because confidentiality ends at death
C) Give only details that were discussed during the final shift
D) Show the neighbor the last nursing note without naming the resident

34.

Scenario

After bathing, a resident requests an approved fragrance-free moisturizer for dry elbows.

What should the nurse aide do?

A) Apply it over any open or bleeding area without reporting and cover the site with a towel
B) Use a roommate's scented lotion because it is already open
C) Apply the resident's product gently to intact skin and report cracks or sores
D) Rub the elbows forcefully until all dry skin is removed

35.

Scenario

A resident says, "I would like to attend the next resident-council meeting."

What should the nurse aide do?

A) Tell the resident that council meetings are limited to employees
B) Require the family to approve attendance
C) Choose a staff member to speak in the resident's place
D) Communicate the request and help the resident access the council process

36.

Scenario

An unfamiliar staff member enters, and the resident asks, "Who is this person and why are they here?"

What should the nurse aide do?

A) Say that residents do not need to know staff identities or duties
B) Ask the unfamiliar person to begin care before answering the resident
C) Ensure the person is properly identified and the role is explained before care continues
D) Tell the resident to ask the roommate about every employee

37.

What should a nurse aide do after noticing a visible kink in oxygen tubing?

A) Keep the resident safe, correct only what is permitted, and notify the nurse if flow may be affected
B) Increase the oxygen flow until the tubing becomes firm
C) Cut the kinked section and reconnect the tubing
D) Turn off the oxygen for the remainder of the shift and ask the resident to breathe slowly without telling the nurse

38.

Scenario

A resident begins discussing a private concern in a crowded dining room and asks the nurse aide to listen.

What should the nurse aide do?

A) Continue the conversation loudly so the resident can be heard
B) Offer a private, quiet place and listen without unnecessary interruptions
C) Ask nearby residents to give advice about the concern
D) Record the conversation on a personal phone for accuracy

39.

Scenario

A nurse aide notices that a resident's tracheostomy ties appear loose.

What should the nurse aide do?

A) Remove the ties and leave the tracheostomy unsupported
B) Tighten them independently with a knot near the opening
C) Ask the resident to hold the tube while the aide finishes other care
D) Stay with the resident, prevent pulling, and summon the nurse immediately

40.

Scenario

A resident asks to speak with a clergy member from a faith tradition unfamiliar to the staff.

What should the nurse aide do?

A) Substitute a clergy member from a different faith without asking and tell the resident the services are equivalent
B) Tell the resident to wait until the next organized service
C) Communicate the request and help use the approved process for the resident's chosen spiritual support
D) Ask another resident to provide religious counseling

41.

Scenario

A feeding tube appears farther out than it did earlier in the shift.

What should the nurse aide do?

A) Stop related care, keep the resident safe, and notify the nurse immediately
B) Push the tube back to the previous marking
C) Secure the tube with household tape and continue
D) Ask the resident to swallow while the aide advances the tube

42.

Scenario

An intravenous pump begins alarming while the nurse aide is helping a resident dress.

What should the nurse aide do?

A) Press several buttons until the alarm stops
B) Keep the resident safe and notify the nurse without changing pump settings
C) Disconnect the tubing so the resident can finish dressing
D) Lower the pump below the resident's arm to improve flow

43.

Scenario

Housekeeping begins waxing the hallway at the time a resident is scheduled to walk there with assistance.

What should the nurse aide do?

A) Walk the resident across the wet floor before the wax dries
B) Cancel all future walking sessions without telling the team
C) Ask the resident to walk alone in another unfamiliar area
D) Coordinate with the nurse and housekeeping for an approved safe route or time

44.

Scenario

A resident with an arm cast has fingers that are newly cool, bluish, and swollen.

What should the nurse aide do?

A) Massage the fingers firmly and apply heat
B) Keep the arm protected and report the changes immediately
C) Push padding farther under the cast with a pencil
D) Lower the arm below the heart for the rest of the shift

45.

Scenario

A surgical drain becomes disconnected while the nurse aide is repositioning a resident.

What should the nurse aide do?

A) Reconnect the drain tubing without telling anyone
B) Place the loose end into the resident's bed linens
C) Prevent pulling, keep the area protected, and notify the nurse immediately
D) Empty the drain and discard it in regular trash

46.

Scenario

A resident can safely use the electric bed controls to raise the head of the bed for reading.

How should the nurse aide support this ability?

A) Keep the controls within reach and let the resident make the planned adjustment
B) Hide the controls so the resident must request every change and wait until staff members are available
C) Disconnect the controls after placing the bed flat
D) Ask the roommate to adjust the bed for the resident

47.

Scenario

A restorative plan uses towel folding to exercise a resident's hands and attention.

What should the nurse aide do?

A) Fold every towel before the resident begins
B) Replace the task with passive hand movement
C) Provide the planned materials and allow the resident to complete the task with supervision
D) Stop the activity whenever the resident works slowly and fold the remaining towels before putting them away

48.

Scenario

A resident suddenly develops facial swelling and difficulty speaking after eating a snack.

What should the nurse aide do?

A) Offer another bite to identify which food caused the problem
B) Ask the resident to walk until the swelling decreases
C) Wait for the next meal before reporting the symptoms
D) Stay with the resident and activate the urgent response immediately

49.

What should a nurse aide do before putting shoes on a resident with reduced foot sensation?

A) Place the shoes on without checking so the feet remain warm and the resident does not need to wait
B) Inspect inside the shoes for rough areas or objects and apply clean dry socks
C) Add loose items inside the shoes to improve circulation
D) Use shoes belonging to another resident if they fit

50.

Scenario

A cool-mist room humidifier listed in the care plan needs its routine water change.

What should the nurse aide do?

A) Add tap water to the old water until the reservoir is full
B) Refill it from another resident's water pitcher
C) Empty and clean it as directed, then refill it with the specified water
D) Leave old water in the reservoir for the entire week

51.

Scenario

A resident with dementia begins laughing loudly during a solemn memorial activity and other residents appear upset.

What is the nurse aide's best response?

A) Approach calmly and guide the resident to a suitable quiet activity without shaming
B) Scold the resident publicly for showing disrespect during the memorial
C) Ask the other residents to laugh so the behavior seems acceptable
D) Require the resident to explain the laughter to the entire group

52.

Which action is appropriate when applying an approved moisturizer during routine skin care?

A) Apply it thickly between the toes and leave the area damp under socks for the rest of the shift
B) Use the same container for several residents without cleaning it
C) Rub it into open sores without reporting the skin damage
D) Warm it in the hands, apply gently to intact skin, and follow the care directions

53.

Scenario

A family member reports that a resident is newly struggling to use utensils and asks about occupational therapy.

What should the nurse aide do?

A) Promise that therapy will begin the same afternoon
B) Design a new hand-exercise program independently
C) Relay the specific observation and request to the nurse or appropriate team member
D) Tell the family that utensil use is not related to resident care

54.

Scenario

A resident says a beard is important to personal and cultural identity and asks that it not be trimmed during grooming.

What should the nurse aide do?

A) Respect the preference and provide cleaning and grooming without trimming the beard
B) Trim one side to make washing easier
C) Ask the roommate to decide the beard length and trim it to match other residents at the table
D) Remove the beard while the resident is asleep

55.

Scenario

A resident with a hand tremor asks the nurse aide to write a message to the activity director.

What should the nurse aide do?

A) Rewrite the message so it expresses the aide's preferred solution
B) Omit details that might make the activity department uncomfortable
C) Ask a family member to create a different message later
D) Write the resident's exact words, read them back for confirmation, and deliver the message appropriately

56.

Scenario

A transport team arrives for an appointment, but the nurse has not completed the required pre-transport check.

What should the nurse aide do?

A) Notify the nurse and keep the resident safe until required clearance is completed
B) Send the resident because the vehicle is waiting and tell the nurse to complete the check by telephone afterward
C) Sign the nurse's portion of the paperwork
D) Ask the transport driver to perform the nursing check

57.

Scenario

A resident asks where to obtain information about advance directives.

What should the nurse aide do?

A) Choose the directive that seems best for the resident and ask the family to sign it before the nurse arrives
B) Say that only terminally ill residents may receive information
C) Connect the resident with the approved nurse or social-service process without influencing the decision
D) Ask the family to complete a directive without the resident

58.

Scenario

A resident asks the nurse aide to sign as a witness on a new will.

What should the nurse aide do?

A) Decline to sign independently and notify the supervisor so the authorized process can be arranged
B) Sign immediately because the resident requested it
C) Ask another resident to witness the document instead
D) Hide the document so no one can change it and return it only after the resident is discharged

59.

Scenario

During an emergency drill, the nurse aide is assigned to account for residents in one hallway.

What should the nurse aide do?

A) Leave the assigned area to watch the drill from outside
B) Follow the assigned role and report resident locations and status through the command process
C) Give independent evacuation orders that conflict with the drill leader and direct visitors to follow them
D) Wait until the drill ends before reporting a missing resident

60.

Scenario

A resident becomes angry after losing a card game and pushes the cards away.

What is the nurse aide's best response?

A) Laugh and tell the resident that losing is not important
B) Require the resident to finish the game before leaving
C) Argue about whether the game was played fairly
D) Acknowledge the frustration, offer a calm break, and maintain respectful limits

61.

Where should a gait belt generally be placed when its use is directed in the care plan?

A) Directly over tubes, wounds, or painful areas
B) Snugly over clothing at the waist while avoiding restricted areas and devices
C) Loosely around the chest beneath both arms
D) Around the resident's neck so the belt cannot slide and can be held from behind during walking

62.

Scenario

A portable oxygen cylinder must accompany a resident to another department.

How should the nurse aide handle the cylinder?

A) Lay it loose across the resident's lap
B) Drag it by the regulator along the floor
C) Carry it under one arm with the valve unprotected while holding the resident's wheelchair with the other hand
D) Secure it upright in the approved carrier and protect it from impact

63.

Scenario

A family member answers every question directed to a resident who is able to communicate independently.

What should the nurse aide do?

A) Direct all future questions to the family member and ask the resident only for final confirmation
B) End the conversation without speaking to the resident
C) Ask the family member to sign every response
D) Address the resident directly and allow time for the resident to answer first

64.

Scenario

A resident objects to a proposed room change and asks for the decision to be reviewed.

What should the nurse aide do?

A) Pack the resident's belongings before reporting the objection
B) Communicate the objection promptly and help the resident access the review process
C) Tell the resident that objections automatically cancel all future care
D) Ask another resident to decide whether the move is fair

65.

Scenario

While providing assigned ostomy care, the nurse aide notices that the stoma appears unusually dusky and dark.

What should the nurse aide do?

A) Press firmly on the stoma to restore color
B) Protect the area and report the color change immediately
C) Cover the stoma with powder and reassess tomorrow
D) Remove the pouch and leave the stoma exposed for the shift

66.

Scenario

A resident becomes dizzy while using an incentive spirometer according to the care plan.

What should the nurse aide do?

A) Stop the exercise, help the resident rest safely, and report the symptom
B) Increase the number of breaths so the resident adapts
C) Tell the resident to hold the breath until the dizziness passes
D) Continue the exercise without mentioning the symptom

67.

Scenario

A resident chooses a favorite robe, but its long hem drags beneath the feet while walking.

What should the nurse aide do?

A) Remove all robes from the resident's closet
B) Explain the trip risk and offer preferred safe clothing options
C) Allow the resident to walk on the dragging hem
D) Cut the robe shorter without the resident's permission

68.

Why must a disinfected surface remain wet for the product's required contact time?

A) The disinfectant needs the specified time to work effectively before the surface is reused
B) A wet surface always appears cleaner than a dry surface and reassures residents that cleaning occurred
C) Contact time prevents the container label from fading
D) The moisture makes all equipment safe without prior cleaning

69.

Scenario

An outside clinic telephones with a message for the nurse about a resident.

What should the nurse aide do?

A) Interpret the message and change the resident's care
B) Record the caller, time, callback information, and exact message, then relay it promptly
C) Post the message in a public hallway for the nurse to see
D) Ask another resident to remember the message until the nurse returns

70.

Scenario

The handle of an ice scoop falls completely into the ice bin used for resident beverages.

What should the nurse aide do?

A) Continue using the ice because the handle looked clean
B) Rinse only the handle and return the scoop to the bin
C) Stop using the bin and follow the sanitation and reporting procedure
D) Bury the scoop deeper so no one touches the handle

PART B - ANSWER KEY AND EXPLANATIONS

Question numbering below corresponds to the questions in Part A.

1	A	2	C	3	A	4	B	5	D
6	A	7	D	8	B	9	C	10	A
11	C	12	D	13	A	14	C	15	B
16	D	17	B	18	B	19	C	20	C
21	A	22	B	23	D	24	A	25	C
26	D	27	C	28	D	29	B	30	A
31	B	32	D	33	A	34	C	35	D
36	C	37	A	38	B	39	D	40	C
41	A	42	B	43	D	44	B	45	C
46	A	47	C	48	D	49	B	50	C
51	A	52	D	53	C	54	A	55	D
56	A	57	C	58	A	59	B	60	D
61	B	62	D	63	D	64	B	65	B
66	A	67	B	68	A	69	B	70	C

1. Correct: A - Turn it off, remove it as directed, and store it in the labeled dry container

Removing and storing the hearing aid in its labeled dry container protects the device from water damage and mix-ups.

2. Correct: C - Confirm the approved arm and avoid pressure on the fistula arm

Pressure on a dialysis access arm can harm the fistula, so the aide should verify and use the approved site.

3. Correct: A - Gently retract as directed, cleanse and rinse, then return the foreskin to its normal position

Returning the foreskin after gentle cleansing prevents constriction and swelling while completing hygiene safely.

4. Correct: B - Offer the approved protector, apply it comfortably, and remove it after the meal

An approved clothing protector can preserve garments and dignity when it is used comfortably and removed promptly.

5. Correct: D - Show interest and invite the resident to share more if desired

Interest in the resident's life story supports identity, self-worth, and person-centered interaction.

6. Correct: A - Confirm the required precautions with the nurse and obtain the correct protective equipment

The aide must verify unreadable precaution directions rather than guess or enter without the required protection.

7. Correct: D - The pads of two or three fingers, avoiding use of the thumb

The thumb has its own pulse and can interfere with an accurate radial-pulse assessment.

8. Correct: B - Use the resident's labeled cleanser according to the care directions

The assigned product reflects the resident's skin needs and prevents unsafe sharing or substitution.

9. Correct: C - Provide assigned care using appropriate precautions and report the discriminatory statement

Residents are entitled to equal care, and standard precautions protect staff without discriminatory withholding of assistance.

10. Correct: A - Acknowledge the frustration, recognize specific progress, and report persistent hopelessness

Validation and realistic encouragement support coping, while continuing hopelessness is an important change to report.

11. Correct: C - Report that a reliable reading could not be obtained and follow the equipment procedure

An aide must report an unsuccessful measurement honestly instead of estimating or entering invented data.

12. Correct: D - Position the switch at the trained foot and verify that the resident can activate it

Correct placement preserves the resident's independent access to assistance and confirms the device is usable.

13. Correct: A - Clean gently, dry the hands, and file rough edges without cutting the cuticles

Gentle cleaning and permitted filing reduce injury risk; cuticle cutting and shared tools can cause harm or infection.

14. Correct: C - Position the magnifier and lighting, then allow time for the resident to choose

Accessible lighting and magnification enable the resident to make an independent meal choice.

15. Correct: B - Move to a quieter area, face the resident, and speak clearly at a normal pace

Reducing background noise and providing facial cues improves understanding without shouting.

16. Correct: D - Keep the resident safe, check only permitted visible connections, and notify the nurse

A mattress alarm may signal loss of pressure-relief function and should not be disabled or replaced with improvised padding.

17. Correct: B - Empty it using the trained procedure, measure as directed, and clean the outlet

Timely trained emptying prevents leakage and supports accurate output recording without changing the entire system independently.

18. Correct: B - Keep the spout from touching the container, close it securely, and perform hand hygiene

Avoiding contact with the container reduces contamination, and secure closure prevents leakage after measurement.

19. Correct: C - Support the head, protect the bed and eyes, and use the planned shampoo method

Proper support and protection allow in-bed hair care without neck strain, wet bedding, or eye exposure.

20. Correct: C - Perform hand hygiene, use appropriate barriers, keep linens separate, and report the drainage

New eye drainage may spread through hands or linens and should be handled with infection-control measures and prompt reporting.

21. Correct: A - Describe the rash and report it promptly without applying an unapproved product

A new widespread rash is a reportable change, and unapproved creams may worsen it or obscure assessment.

22. Correct: B - Protect clothing and bedding, wash gently with approved products, and dry thoroughly

Bedside beard care should protect the environment while respecting the resident's grooming preference and skin comfort.

23. Correct: D - Follow cleansing directions and collect the midstream urine without touching the container interior

Proper cleansing, midstream collection, and a clean container help prevent contamination of the specimen.

24. Correct: A - Help the resident obtain private access to the ombudsman contact process

Residents may contact an advocate privately without first disclosing or withdrawing a complaint.

25. Correct: C - Stay calm, reduce stimulation, use the planned coping approach, and notify the nurse

A calm presence and established coping method support safety while the new panic symptoms are reported.

26. Correct: D - Leave the task safely, remove the soiled garment as directed, clean the hands, and report the exposure

Prompt removal and hygiene limit continued exposure, and reporting allows required occupational follow-up.

27. Correct: C - Position the resident upright and place the tray and utensils within safe reach

Upright positioning and accessible setup support safer swallowing and independent eating.

28. Correct: D - Soften the hair, protect the skin, and use gentle strokes as directed

Softening hair and using gentle planned technique reduce cuts and skin irritation from a disposable razor.

29. Correct: B - Notify the charge nurse and clarify who is responsible before care is missed

An omitted assignment requires prompt clarification so one resident's needs are not overlooked.

30. Correct: A - Help the resident obtain the approved fee information before agreeing to the service

Residents should receive accurate information about optional charges before deciding whether to purchase a service.

31. Correct: B - Reassure the resident respectfully, invite choices, and report persistent distress

Matter-of-fact reassurance and meaningful choices reduce guilt while persistent emotional distress is communicated to the nurse.

32. Correct: D - Set up the device as planned and allow the resident to use it with needed supervision

Setup and supervision support a learned one-handed skill without taking over the task.

33. Correct: A - Keep the information confidential and refer the question through an authorized channel

A resident's private health information is not released by a nurse aide after death; authorized staff handle disclosure.

34. Correct: C - Apply the resident's product gently to intact skin and report cracks or sores

Approved moisturizer supports intact dry skin, while damaged areas require reporting rather than unapproved treatment.

35. Correct: D - Communicate the request and help the resident access the council process

Resident councils provide a way for residents to participate and voice concerns without staff replacing their role.

36. Correct: C - Ensure the person is properly identified and the role is explained before care continues

A resident has the right to know who is providing care and why that person is present.

37. Correct: A - Keep the resident safe, correct only what is permitted, and notify the nurse if flow may be affected

A visible kink can interrupt oxygen delivery, but the aide must not change the prescribed flow or alter equipment independently.

38. Correct: B - Offer a private, quiet place and listen without unnecessary interruptions

A private low-noise setting protects confidentiality and helps the resident communicate a sensitive concern.

39. Correct: D - Stay with the resident, prevent pulling, and summon the nurse immediately

Loose tracheostomy ties can threaten tube security and require immediate licensed assistance, not independent adjustment.

40. Correct: C - Communicate the request and help use the approved process for the resident's chosen spiritual support

The resident defines the desired spiritual support, and staff should facilitate access without substituting another faith.

41. Correct: A - Stop related care, keep the resident safe, and notify the nurse immediately

A changed tube position may indicate displacement, which the aide should report without pushing or advancing the tube.

42. Correct: B - Keep the resident safe and notify the nurse without changing pump settings

Pump alarms require licensed evaluation; the aide protects the resident and avoids manipulating treatment settings.

43. Correct: D - Coordinate with the nurse and housekeeping for an approved safe route or time

Cross-department coordination preserves the walking plan while avoiding a freshly waxed fall hazard.

44. Correct: B - Keep the arm protected and report the changes immediately

Cool, blue, swollen fingers may indicate impaired circulation and require prompt reporting without massage or probing the cast.

45. Correct: C - Prevent pulling, keep the area protected, and notify the nurse immediately

A disconnected surgical drain requires licensed attention; the aide should prevent further tension and not reconnect it.

46. Correct: A - Keep the controls within reach and let the resident make the planned adjustment

Accessible controls allow the resident to use a safe ability independently within the care plan.

47. Correct: C - Provide the planned materials and allow the resident to complete the task with supervision

The restorative activity builds function only when the resident performs the task with appropriate support.

48. Correct: D - Stay with the resident and activate the urgent response immediately

Sudden facial swelling with speaking difficulty may signal a severe reaction requiring immediate emergency help.

49. Correct: B - Inspect inside the shoes for rough areas or objects and apply clean dry socks

Reduced sensation may prevent the resident from noticing pressure or debris that can injure the feet.

50. Correct: C - Empty and clean it as directed, then refill it with the specified water

Routine emptying, cleaning, and use of the specified water limit microbial growth in a resident-care humidifier.

51. Correct: A - Approach calmly and guide the resident to a suitable quiet activity without shaming

Calm redirection protects the resident's dignity and the group's emotional setting without public correction or ridicule.

52. Correct: D - Warm it in the hands, apply gently to intact skin, and follow the care directions

Gentle application of an approved product protects comfort and avoids moisture trapping or treatment of damaged skin without direction.

53. Correct: C - Relay the specific observation and request to the nurse or appropriate team member

The aide contributes useful functional information while the licensed team coordinates any therapy referral.

54. Correct: A - Respect the preference and provide cleaning and grooming without trimming the beard

Grooming care should preserve the resident's stated personal and cultural identity unless a safety need is addressed through the plan.

55. Correct: D - Write the resident's exact words, read them back for confirmation, and deliver the message appropriately

Exact transcription and read-back preserve the resident's own meaning when physical difficulty prevents independent writing.

56. Correct: A - Notify the nurse and keep the resident safe until required clearance is completed

The aide should coordinate the delay rather than bypass a required nursing check or sign outside the aide's role.

57. Correct: C - Connect the resident with the approved nurse or social-service process without influencing the decision

Residents have a right to information about advance directives, while the aide remains neutral and uses the proper resource.

58. Correct: A - Decline to sign independently and notify the supervisor so the authorized process can be arranged

Legal-document witnessing requires the approved process; the aide should not assume authority or recruit another resident.

59. Correct: B - Follow the assigned role and report resident locations and status through the command process

Emergency drills depend on coordinated roles and immediate accurate reporting rather than conflicting independent orders.

60. Correct: D - Acknowledge the frustration, offer a calm break, and maintain respectful limits

Validation and a quiet pause can reduce escalation without ridicule, argument, or forced participation.

61. Correct: B - Snugly over clothing at the waist while avoiding restricted areas and devices

Correct placement provides a secure handhold without pressing on wounds, tubes, or painful areas.

62. Correct: D - Secure it upright in the approved carrier and protect it from impact

Securing a cylinder prevents falls and valve damage during transport.

63. Correct: D - Address the resident directly and allow time for the resident to answer first

Speaking to the capable resident preserves autonomy and prevents family members from replacing the resident's voice.

64. Correct: B - Communicate the objection promptly and help the resident access the review process

The resident's concern should reach the proper staff before the move proceeds through the facility process.

65. Correct: B - Protect the area and report the color change immediately

A dusky or dark stoma is an urgent abnormal finding that should be protected and reported without pressure or powder.

66. Correct: A - Stop the exercise, help the resident rest safely, and report the symptom

Dizziness during a planned breathing exercise requires stopping, safe rest, and reporting rather than increasing effort.

67. Correct: B - Explain the trip risk and offer preferred safe clothing options

Offering acceptable alternatives protects mobility while preserving the resident's choice and ownership of clothing.

68. Correct: A - The disinfectant needs the specified time to work effectively before the surface is reused

Contact time is part of correct disinfection and must be completed before the surface or equipment returns to use.

69. Correct: B - Record the caller, time, callback information, and exact message, then relay it promptly

Complete accurate message-taking supports timely communication without the aide interpreting or changing care.

70. Correct: C - Stop using the bin and follow the sanitation and reporting procedure

A submerged handle contaminates the ice supply, which must be removed from service and handled through the sanitation process.
