CNA EXAM PREP

Practice Exam 08

70 practice questions | Printable Practice Exam

Instructions	Select the single best answer for each question. An answer key with explanations begins after the question section.

PART A - QUESTIONS

1.

Scenario

A resident presses the bedside call pendant. The hallway light turns on, but no sound reaches the desk and staff cannot hear the resident through the call system.

What should the nurse aide do?

A) Tell the resident to shout whenever help is needed
B) Leave the faulty pendant in place until monthly maintenance
C) Provide an approved temporary way to call for help within reach and report the malfunction immediately
D) Move the resident's bed next to the doorway without permission

2.

Scenario

After a pet-therapy dog leaves the unit, a resident becomes tearful and says, "It reminded me of the dog I had for 14 years."

What is the nurse aide's best response?

A) Tell the resident to avoid future pet-therapy visits
B) Acknowledge the loss and invite the resident to share a memory if desired
C) Explain that the therapy dog was never the resident's pet
D) Change the subject immediately so the resident will not cry

3.

Scenario

A resident uses a speech-generating tablet and needs several seconds to select each word.

How should the nurse aide communicate?

A) Ask a family member to answer every question
B) Finish each message aloud before the resident completes it
C) Allow time for the resident to create the message and confirm its meaning
D) Turn off the device and rely only on gestures

4.

Scenario

The nurse aide notices a sharp metal staple protruding from the seat of a resident's upholstered chair.

What should the nurse aide do?

A) Cover the staple with a washcloth and continue using the chair
B) Push the staple down with a bare hand
C) Ask the resident to sit only on the opposite side
D) Keep the resident from using the chair and report the hazard for repair

5.

Scenario

A pest-control contractor arrives to treat a resident's room, but the resident and personal care supplies have not been relocated as required by the facility preparation plan.

What should the nurse aide do?

A) Let treatment begin while the resident remains in bed
B) Pause the treatment and notify the nurse and appropriate departments so the plan can be completed safely
C) Hide the supplies beneath a blanket
D) Ask the resident to direct the chemical application

6.

During perineal care, what should a nurse aide do after a clean gloved hand accidentally touches the bedrail?

A) Remove the contaminated gloves, perform hand hygiene, and put on new gloves
B) Wipe the gloves on a clean towel and continue
C) Rinse the gloves with water while wearing them
D) Continue because the bedrail belongs to the resident

7.

Before using a temporal thermometer on a forehead damp with perspiration, what should the nurse aide do?

A) Dry the forehead and use the device according to its instructions and facility policy
B) Cover the forehead with a blanket for ten minutes
C) Take the temperature through wet hair
D) Add one degree to the displayed result

8.

Scenario

A resident says the dining room noise is overwhelming and asks to eat in a quieter approved area.

What is the nurse aide's best response?

A) Insist that all residents eat in the main dining room
B) Tell the resident to wear earplugs during every meal
C) Say that avoiding noise will make the problem worse
D) Respect the request and help arrange the quieter option according to the care plan

9.

Scenario

While helping a resident dress, the nurse aide notices that the resident's abdomen looks newly swollen and the waistband feels unusually tight.

What should the nurse aide do?

A) Report the new abdominal change promptly to the nurse
B) Tighten the waistband so the swelling will decrease
C) Massage the abdomen until it becomes soft
D) Wait several days to see whether the swelling resolves

10.

What should a nurse aide do if a disposable protective gown is torn before it is put on?

A) Cover the tear with paper tape
B) Wear the gown backward over another torn gown
C) Discard it as directed and obtain an intact gown before care
D) Use it if the tear is below the waist

11.

Scenario

A resident says the room feels too warm and asks to have the temperature lowered within the facility's safe range.

What should the nurse aide do?

A) Say that staff select one temperature for everyone
B) Open an exterior window regardless of weather or policy
C) Honor the preference when possible and seek help adjusting the room safely
D) Tell the resident to wait until the next shift

12.

Scenario

A resident with limited hand strength cannot peel the orange served at breakfast and asks for help.

What should the nurse aide do?

A) Remove the orange and record that the resident refused it
B) Feed the resident without asking about preferences
C) Replace it with candy from the nurse aide's bag
D) Assist with peeling or sectioning it as requested and permitted by the diet plan

13.

Scenario

A resident asks the nurse aide to arrange her long hair in a loose braid for the day.

What should the nurse aide do?

A) Follow the resident's preference, using her clean grooming items and avoiding painful pulling
B) Cut the hair shorter so it will be easier to manage
C) Make a tight braid so it cannot come loose
D) Refuse because hairstyles are not part of personal care

14.

Scenario

A resident asks to sit with a friend at dinner instead of using the usual assigned table. The change can be considered without violating a safety restriction.

What should the nurse aide do?

A) Say assigned seats can never be changed
B) Move another resident without asking
C) Tell the resident that social preferences do not matter
D) Communicate the request and support a safe seating change through the facility process

15.

Scenario

A resident's shirt sleeve becomes soaked while the resident washes at the sink.

What should the nurse aide do?

A) Roll the wet sleeve against the skin until it dries
B) Cover the sleeve with a plastic bag for the rest of the day
C) Ignore it because the water was clean
D) Dry the skin and offer a clean, dry garment while protecting privacy

16.

Scenario

A family member brings hair dye, but the resident says, "I want to keep my gray hair exactly as it is."

What should the nurse aide do?

A) Apply the dye because the family paid for it
B) Ask the family member to decide
C) Respect the resident's preference and do not apply the dye
D) Mix only half of the dye into the resident's shampoo

17.

Scenario

A resident returns from an outside appointment carrying a new compression sleeve, but there are no directions for it in the care plan.

What should the nurse aide do?

A) Apply it tightly because it came from a clinic
B) Let another resident demonstrate how to use it
C) Give it to the nurse and obtain clarified directions before assisting with it
D) Put it away and never mention it

18.

Scenario

The nurse aide sees a slimy residue inside the ice-dispenser chute used to fill residents' water cups.

What should the nurse aide do?

A) Stop using the dispenser and report it so cleaning and inspection can occur
B) Wipe only the visible edge with a resident's napkin
C) Continue using the ice from the center of the bin
D) Add a scented cleaner directly to the ice

19.

Scenario

A resident's gums begin bleeding unexpectedly during gentle routine mouth care.

What should the nurse aide do?

A) Stop the care, protect the resident from swallowing blood, and report the bleeding to the nurse
B) Scrub harder until the bleeding stops
C) Apply an unapproved numbing product
D) Ignore the bleeding because mouth care caused it

20.

Scenario

A resident becomes upset when a familiar weekly game is moved to a different activity room.

What is the nurse aide's best response?

A) Acknowledge the distress, explain the accurate location, and offer to accompany the resident
B) Say that the change is too minor to discuss
C) Tell the resident the game has been canceled
D) Insist that the resident find the new room alone

21.

Scenario

A resident's personal bath sponge has split open and has dark residue trapped inside.

What should the nurse aide do?

A) Close the split with an elastic band
B) Share a roommate's sponge for the bath
C) Apply disinfectant and use it immediately on the resident's face
D) Remove it from use and obtain a clean approved replacement

22.

How should a nurse aide support a resident who can fasten a shirt independently when it has magnetic closures?

A) Hide the adapted shirt so the resident will practice regular buttons
B) Place the shirt within reach and allow enough time for the resident to use it
C) Fasten the shirt before giving it to the resident
D) Ask the family to dress the resident instead

23.

Scenario

A resident says tomorrow's bath time conflicts with an important cultural festival activity.

What should the nurse aide do?

A) Tell the resident the schedule can never change
B) Secretly skip the bath and make no record
C) Ask the resident to miss the festival
D) Report the preference and help the team coordinate an appropriate schedule change

24.

Scenario

After hair washing, a resident asks the nurse aide to use the resident's approved handheld hair dryer.

What should the nurse aide do?

A) Use the hottest setting and hold the dryer in one place
B) Keep the dryer away from water, use a comfortable setting, and move the airflow continuously
C) Place the running dryer on the wet sink
D) Aim the airflow directly into the resident's ear

25.

Scenario

A resident relies on a portable captioning device during conversation.

What should the nurse aide do?

A) Speak clearly near the device's microphone, one person at a time, and verify understanding
B) Shout from the doorway so the device will detect the voice
C) Cover the screen to prevent distraction
D) Turn on a television while speaking to provide background sound

26.

Scenario

A resident asks to spend time in the accessible courtyard during its scheduled open period.

What should the nurse aide do?

A) Refuse because outdoor access is only for visitors
B) Send the resident outside alone without checking the care plan
C) Support the choice and arrange any assistance required by the care plan
D) Tell the resident that fresh air is not part of care

27.

Scenario

Lunch is delayed, and a resident becomes anxious and says that not knowing when food will come reminds her of going hungry as a child.

What is the nurse aide's best response?

A) Say that childhood events should be forgotten
B) Promise a delivery time that has not been confirmed
C) Tell the resident that other people are waiting too
D) Acknowledge the concern, give an accurate update, and offer support while checking on the meal

28.

Scenario

The humidifier bottle attached to a resident's prescribed oxygen setup appears empty. The nurse aide has no directions to refill it.

What should the nurse aide do?

A) Fill it with tap water from the bathroom
B) Notify the nurse promptly and do not alter the oxygen setup
C) Turn the oxygen off until the next shift
D) Increase the flow rate to replace the missing humidity

29.

Scenario

The nurse aide notices that a bedside suction canister is nearly full. The aide has not been trained or directed to change it.

What should the nurse aide do?

A) Disconnect and empty it into the sink
B) Report it promptly to the nurse and keep the equipment undisturbed
C) Turn the suction to its highest setting
D) Hide the canister behind the bedside cabinet

30.

Scenario

A meal tray contains a food that is listed as an allergy in the resident's current care plan.

What should the nurse aide do?

A) Remove only the visible pieces and serve the rest
B) Ask the resident to taste a small amount
C) Keep the tray from being served and notify the nurse and dietary staff immediately
D) Change the allergy entry in the care plan

31.

Scenario

A resident who communicates with a picture board points to a body map when asked about discomfort.

What should the nurse aide do?

A) Guess the cause and write it in the record
B) Tell the resident that pictures cannot describe pain
C) Wait until the resident can speak the answer
D) Confirm the location and the resident's description, then report the information accurately

32.

Scenario

Earlier in the morning a resident asked to keep the privacy curtain open, but now asks the nurse aide to close it.

What should the nurse aide do?

A) Clarify and follow the resident's current request
B) Follow the earlier request for the entire shift
C) Ask the roommate which choice is best
D) Close the curtain only after the resident explains the change

33.

Scenario

While cleaning a resident's eyeglasses, the nurse aide sees a new red area where a nose pad rests against the skin.

What should the nurse aide do?

A) Remove pressure from the area as allowed and report the skin change
B) Tighten the nose pads against the red area
C) Cover the redness with cosmetic concealer
D) Wait until the skin opens before reporting it

34.

Scenario

A reusable spill-resistant cup lid has dried beverage residue around its removable valve.

What should the nurse aide do?

A) Scrape the valve with a sharp pin
B) Add fresh beverage without cleaning the lid
C) Wipe only the outside and replace the lid
D) Clean the approved removable parts, rinse them, and allow them to dry according to facility procedure

35.

Before taking a blood pressure, what should a nurse aide do if the cuff tubing is sharply kinked?

A) Correct the kink or obtain functioning equipment before measuring
B) Inflate the cuff twice as high as usual
C) Hold the kink closed while reading the gauge
D) Record a normal value without taking the measurement

36.

Scenario

A coworker asks the nurse aide to sign a competency checklist stating that the coworker performed a skill that the aide did not observe.

What should the nurse aide do?

A) Sign because the coworker says the skill was completed
B) Sign only with a pencil so it can be erased
C) Refuse to attest to an unobserved skill and report the request through the proper process
D) Ask a resident to sign as the witness

37.

Scenario

A resident with a hand tremor becomes frustrated while trying to use a touchscreen to view family photographs.

What is the nurse aide's best response?

A) Acknowledge the frustration and offer the least assistance needed while preserving the resident's choices
B) Take the device away for the rest of the day
C) Tell the resident that older adults cannot learn touchscreens
D) Select and delete photographs without asking

38.

A resident with low vision identifies personal shampoo and conditioner by different approved raised-dot labels. How should the nurse aide help?

A) Peel off the labels so the bottles look alike
B) Choose a bottle without telling the resident
C) Replace both products with an unlabeled shared bottle
D) Keep the labeled bottles arranged as planned and allow the resident to select the product

39.

Scenario

A resident asks the nurse aide to shave a painful foot callus with a razor. This treatment is not assigned to the aide.

What should the nurse aide do?

A) Shave only the thickest part
B) Explain the role limit and report the resident's request to the nurse
C) Ask a visitor to perform the treatment
D) Apply an unapproved callus-removal chemical

40.

Scenario

While helping a resident place an online order, a coworker suggests using the resident's reward points to add a personal item for the coworker.

What should the nurse aide do?

A) Agree because reward points are not cash
B) Use only half the points and keep it secret
C) Refuse and report the attempted personal use of the resident's benefits
D) Ask the retailer to hide the extra item on the receipt

41.

Scenario

Brown-discolored water begins flowing from the sink while the nurse aide is preparing a basin for personal care.

What should the nurse aide do?

A) Add extra soap until the color is hidden
B) Use the water only on skin that is not broken
C) Stop using the water and report the change before obtaining an approved safe water source
D) Let the basin stand until sediment settles and then use the top layer

42.

Scenario

A resident asks whether the bed can be positioned so the resident can see the garden. The arrangement has not yet been checked for access to equipment and exits.

What should the nurse aide do?

A) Refuse because every room must look identical
B) Move the bed alone and block whichever outlet is closest
C) Tell the resident to look at a photograph of the garden instead
D) Communicate the preference and help coordinate a safe room arrangement

43.

Scenario

Before walking, a resident says one shoe feels uncomfortable. The nurse aide sees that the shoe tongue is folded beneath the top of the foot.

What should the nurse aide do?

A) Add another sock over the folded tongue
B) Reposition the tongue smoothly and check comfort before walking
C) Tell the resident to walk until the fold flattens
D) Remove both shoes and walk the resident in socks

44.

Scenario

A resident tells the nurse aide, "I suddenly cannot hear anything from my right ear."

What should the nurse aide do?

A) Insert a cotton swab to look for wax
B) Report the sudden change promptly to the nurse
C) Pour warm water into the ear
D) Wait until the resident's next routine appointment

45.

Scenario

An automatic entrance door begins closing too quickly and nearly strikes a resident using a walker.

What should the nurse aide do?

A) Increase the resident's walking speed through the doorway
B) Keep residents away from the unsafe door and report it for immediate attention
C) Place a chair in the doorway and continue using it
D) Disable the door's safety sensor

46.

A resident can operate a voice-controlled bedside lamp independently. What should the nurse aide do?

A) Disconnect the lamp to prevent repeated use
B) Turn the lamp on and off without asking
C) Move the lamp where it cannot hear the resident
D) Keep the approved control available and encourage the resident to operate it

47.

Scenario

A resident selects two clean socks of different colors. They are the same size, fit safely, and the resident says, "I like this pair."

What should the nurse aide do?

A) Replace them with matching socks without asking
B) Help with the chosen socks and respect the resident's harmless style preference
C) Tell the resident that mismatched socks are not allowed
D) Ask another resident to decide what looks appropriate

48.

Scenario

After biting a hard piece of food, a resident says that one tooth suddenly feels loose.

What should the nurse aide do?

A) Wiggle the tooth to see how loose it is
B) Keep the tooth undisturbed, stop hard food, and report the change promptly
C) Pull the tooth with a tissue
D) Tell the resident to chew on that side to test it

49.

Scenario

The nurse aide notices a musty odor and fuzzy growth on a water-damaged wall beside a resident's bed.

What should the nurse aide do?

A) Keep the resident away from the affected area and report the environmental hazard promptly
B) Scrape the growth into a wastebasket with a dry brush
C) Cover the area with the resident's blanket
D) Spray air freshener and move the bed against the wall

50.

Scenario

Soup splashes onto a resident's shirt near the end of lunch. The resident says, "I want to finish eating before I change."

What should the nurse aide do?

A) Remove the shirt immediately despite the resident's request
B) End the meal and return the tray
C) Protect the skin, offer a napkin, and honor the resident's preference to change after eating if safe
D) Cover the wet area with a plastic sheet against the skin

51.

Scenario

After the head of an electric bed is raised, it slowly drifts downward without anyone touching the control.

What should the nurse aide do?

A) Wedge a food tray beneath the bed frame
B) Ask the resident to hold the control continuously
C) Place the resident safely, stop using the faulty function, and report the bed for repair
D) Ignore the movement if it happens slowly

52.

Scenario

A resident can feed himself when a plate guard is attached to the plate.

What should the nurse aide do?

A) Remove the plate guard to make the meal look more typical
B) Position the approved plate guard and allow the resident time to eat independently
C) Feed the resident before the food cools
D) Place all food directly on the table

53.

Scenario

The nurse aide notices a new fine tremor in a resident's hands while the resident is resting.

What should the nurse aide do?

A) Diagnose the cause as anxiety
B) Hold the resident's hands down
C) Observe relevant details and report the new change to the nurse
D) Ask the resident to hide the tremor from visitors

54.

Scenario

A resident says a strongly scented sachet stored with the clothes makes the skin itch.

What should the nurse aide do?

A) Add more fragrance to cover the smell
B) Tell the resident that scented clothing is required
C) Spray perfume directly on the irritated skin
D) Remove the scented item, offer clean fragrance-free clothing, and report the itching

55.

Scenario

A single-use cold pack begins leaking gel before it is applied to a resident.

What should the nurse aide do?

A) Do not use it; contain it according to policy and obtain an intact pack
B) Wrap the leaking pack in a pillowcase and apply it
C) Squeeze out the gel and fill the pack with water
D) Place the pack directly on the resident's skin

56.

Scenario

Staff want to display a resident's painting in a public hallway with the resident's full name.

What should the nurse aide do?

A) Obtain and honor the resident's permission about displaying and identifying the artwork
B) Display it because anything made during activities belongs to the facility
C) Add the resident's diagnosis beneath the name
D) Ask other residents to vote on whether permission is needed

57.

Scenario

While resting, a resident's lips become bluish and the resident begins breathing faster than usual.

What should the nurse aide do?

A) Ask the resident to walk around the room
B) Wait until the next scheduled vital-sign round
C) Stay with the resident and summon immediate nursing or emergency help according to policy
D) Give the resident food and leave to find a blanket

58.

Scenario

The measurement markings on a graduated container are worn away and cannot be read clearly before urine output is measured.

What should the nurse aide do?

A) Obtain a clean container with legible markings before measuring
B) Guess the amount from the container's height
C) Copy the resident's previous output
D) Draw new markings by memory with a pen

59.

Scenario

A resident with low vision asks the nurse aide to read the printed activity schedule aloud.

How should the nurse aide respond?

A) Mention only the activities the aide prefers
B) Read all listed choices accurately and allow the resident to decide
C) Select an activity without reading the schedule
D) Ask the roommate to choose for the resident

60.

When assisting a resident with routine handwashing before a snack, what should the nurse aide do?

A) Wipe only the palms on a dry towel
B) Use soap and warm water, rinse well, and dry the hands, including between the fingers
C) Use very hot water to shorten the washing time
D) Leave the hands wet so they can air-dry on the food tray

61.

Scenario

A bathroom door lock jams while a resident inside says, "I am safe, but I cannot open the door."

What should the nurse aide do?

A) Leave and check again at the end of the shift
B) Tell the resident to climb over a partition
C) Stay in communication and summon help using the facility's emergency-entry procedure
D) Force the door open by running into it

62.

Scenario

A staff member proposes writing residents' full names and detailed toileting schedules on a whiteboard visible from a public corridor.

What should the nurse aide do?

A) Protect confidentiality and use only the facility's approved private communication method
B) Agree because schedules are not health information
C) Add room numbers and diagnoses to make the board clearer
D) Invite visitors to help update the board

63.

Scenario

A resident with dementia calmly sorts clean plastic utensils into groups and appears content. The activity is safe.

What should the nurse aide do?

A) Take the utensils away because the groups are not correct
B) Quiz the resident about the names of all utensils
C) Tell the resident to stop repeating the activity
D) Allow the safe, purposeful activity and offer encouragement

64.

Scenario

A resident with limited grip strength can unlock a personal bedside drawer by using an approved oversized key turner.

What should the nurse aide do?

A) Keep the drawer permanently unlocked
B) Store the key where only staff can reach it
C) Make the key turner accessible and allow the resident to use it
D) Open the drawer each time without asking

65.

Scenario

At shift change, the incoming nurse aide finds that the fluid-intake record is blank even though the resident drank during the previous shift.

What should the incoming aide do?

A) Estimate an amount and enter it as exact
B) Report the gap and communicate only verified information through the proper handoff process
C) Copy yesterday's total
D) Leave the entire day's record blank without telling anyone

66.

Scenario

A resident explains that prolonged direct eye contact feels disrespectful in the resident's culture.

What should the nurse aide do?

A) Require eye contact to prove the resident is listening
B) Avoid speaking to the resident
C) Tell the resident that facility customs are more important
D) Respect the preference and ask how the resident would like staff to communicate

67.

Scenario

A resident prefers foods on the plate not to touch and asks to use the resident's divided plate.

What should the nurse aide do?

A) Use the approved divided plate and arrange the meal as requested within the diet plan
B) Mix all foods together before serving
C) Remove one food so the sections look even
D) Tell the resident that plate preferences are childish

68.

Scenario

A resident's washable slippers have been cleaned and are still damp inside when it is time to walk to an activity.

What should the nurse aide do?

A) Put plastic bags inside the slippers
B) Have the resident wear the damp slippers for the short walk
C) Dry only the outside with a towel
D) Offer safe, dry footwear and allow the slippers to dry completely according to their care instructions

69.

Scenario

During a planned pivot transfer, a resident suddenly says, "My leg will not hold me," before leaving the bed.

What should the nurse aide do?

A) Pull harder on the resident's arms
B) Stop the transfer, keep the resident safe, call for help, and report the change
C) Continue quickly before the leg weakens more
D) Ask the resident to hop on the other leg

70.

When a care plan permits assistance with dental floss, what should the nurse aide do?

A) Snap the floss forcefully into the gums
B) Guide it gently and use a clean section as the floss moves from one tooth space to another
C) Reuse one short soiled section for the entire mouth
D) Stop all other oral care permanently if the gums are sensitive

PART B - ANSWER KEY AND EXPLANATIONS

Question numbering below corresponds to the questions in Part A.

1	C	2	B	3	C	4	D	5	B
6	A	7	A	8	D	9	A	10	C
11	C	12	D	13	A	14	D	15	D
16	C	17	C	18	A	19	A	20	A
21	D	22	B	23	D	24	B	25	A
26	C	27	D	28	B	29	B	30	C
31	D	32	A	33	A	34	D	35	A
36	C	37	A	38	D	39	B	40	C
41	C	42	D	43	B	44	B	45	B

61	C	62	A	63	D	64	C	65	B
66	D	67	A	68	D	69	B	70	B

1. Correct: C - Provide an approved temporary way to call for help within reach and report the malfunction immediately

The resident must have a reliable way to summon assistance at all times. An accessible temporary method protects the resident while the faulty system is reported and corrected.

2. Correct: B - Acknowledge the loss and invite the resident to share a memory if desired

Acknowledging emotion and listening support grief without minimizing it. Avoidance, correction, or an abrupt subject change can make the resident feel dismissed.

3. Correct: C - Allow time for the resident to create the message and confirm its meaning

The device is the resident's voice, so patience and confirmation promote accurate, resident-directed communication. Speaking for the resident or removing the device reduces independence.

4. Correct: D - Keep the resident from using the chair and report the hazard for repair

A protruding staple can cut the resident or damage clothing. The unsafe chair should not be used until the hazard is properly corrected.

5. Correct: B - Pause the treatment and notify the nurse and appropriate departments so the plan can be completed safely

Chemical treatment should not begin until the required resident and supply protections are in place. The aide should coordinate through the team rather than improvise or expose the resident.

6. Correct: A - Remove the contaminated gloves, perform hand hygiene, and put on new gloves

Touching the bedrail contaminates the gloves. Changing gloves and cleaning the hands prevents microorganisms from being carried to the resident during personal care.

7. Correct: A - Dry the forehead and use the device according to its instructions and facility policy

Moisture can affect a temporal temperature measurement. The aide should prepare the site and use the device as directed rather than inventing a correction factor.

8. Correct: D - Respect the request and help arrange the quieter option according to the care plan

A reasonable quieter setting can reduce distress while preserving the resident's choice and nutrition. The aide should coordinate the option within the plan rather than forcing or dismissing the resident.

9. Correct: A - Report the new abdominal change promptly to the nurse

New abdominal swelling or tightness is a change in condition that requires nursing assessment. Massage, tight clothing, and delayed reporting could cause harm or postpone needed care.

10. Correct: C - Discard it as directed and obtain an intact gown before care

A torn gown may not provide the required protective barrier. Repairing or layering damaged disposable equipment does not make it reliable.

11. Correct: C - Honor the preference when possible and seek help adjusting the room safely

Residents have a right to reasonable comfort and personal preferences. The adjustment must still follow facility safety requirements.

12. Correct: D - Assist with peeling or sectioning it as requested and permitted by the diet plan

Limited hand strength should not prevent the resident from eating a permitted food. Providing only the requested setup help supports both choice and independence.

13. Correct: A - Follow the resident's preference, using her clean grooming items and avoiding painful pulling

Grooming should reflect the resident's personal choices while protecting comfort and scalp integrity. Cutting hair or using an unnecessarily tight style violates preference and may cause pain.

14. Correct: D - Communicate the request and support a safe seating change through the facility process

Residents should have meaningful choices about social interaction and dining preferences when safety permits. The aide should help route the request without displacing another resident unilaterally.

15. Correct: D - Dry the skin and offer a clean, dry garment while protecting privacy

Prolonged wet fabric can cause chilling, discomfort, and skin irritation. Promptly drying the resident and replacing the garment protects comfort and dignity.

16. Correct: C - Respect the resident's preference and do not apply the dye

The resident directs personal grooming choices. A family member's preference or purchase does not replace the resident's right to refuse.

17. Correct: C - Give it to the nurse and obtain clarified directions before assisting with it

A compression device requires current directions and correct use. The aide should not independently add it to care or decide how tightly it should be applied.

18. Correct: A - Stop using the dispenser and report it so cleaning and inspection can occur

Residue in an ice dispenser can contaminate ice and resident beverages. Wiping a visible edge does not establish that the internal food-contact area is safe.

19. Correct: A - Stop the care, protect the resident from swallowing blood, and report the bleeding to the nurse

Unexpected gum bleeding is a change that requires reporting. More scrubbing or an unapproved product could injure the tissue further.

20. Correct: A - Acknowledge the distress, explain the accurate location, and offer to accompany the resident

A change in a familiar routine can be upsetting. Calm validation, accurate orientation, and practical support help the resident adjust without ridicule or deception.

21. Correct: D - Remove it from use and obtain a clean approved replacement

A split sponge with trapped residue cannot be cleaned reliably for personal care. Sharing another resident's sponge or using harsh chemicals creates contamination and skin risks.

22. Correct: B - Place the shirt within reach and allow enough time for the resident to use it

An approved adaptation enables the resident to complete the task independently. Doing the task for the resident or removing the adaptation reduces ability and confidence.

23. Correct: D - Report the preference and help the team coordinate an appropriate schedule change

Sharing the resident's preference allows the team to balance needed care with meaningful cultural participation. The aide should not secretly omit care or promise a change alone.

24. Correct: B - Keep the dryer away from water, use a comfortable setting, and move the airflow continuously

Keeping an electrical dryer away from water reduces shock risk, while a comfortable moving airflow helps prevent scalp burns. A running dryer should never be placed on a wet surface.

25. Correct: A - Speak clearly near the device's microphone, one person at a time, and verify understanding

A clear signal and one speaker help the captioning device produce an accurate message. Verification catches errors without shouting or adding distracting noise.

26. Correct: C - Support the choice and arrange any assistance required by the care plan

Residents should be supported in safe access to common outdoor areas. The care plan determines what assistance is needed; the choice should not be refused arbitrarily.

27. Correct: D - Acknowledge the concern, give an accurate update, and offer support while checking on the meal

Trauma-informed care recognizes the resident's fear without making false promises. Honest information and practical follow-up can restore a sense of safety.

28. Correct: B - Notify the nurse promptly and do not alter the oxygen setup

The humidifier is part of prescribed oxygen equipment and requires the correct fluid and procedure. An aide without directions should not refill it, stop oxygen, or change the flow rate.

29. Correct: B - Report it promptly to the nurse and keep the equipment undisturbed

Suction equipment is connected to clinical care and should not be disconnected by an untrained aide. Prompt reporting allows qualified staff to manage the canister safely.

30. Correct: C - Keep the tray from being served and notify the nurse and dietary staff immediately

Serving a listed allergen can cause serious harm. Removing visible pieces does not make the tray safe, and the nurse aide may not change the care plan.

31. Correct: D - Confirm the location and the resident's description, then report the information accurately

The communication aid provides resident-specific information. Confirmation and accurate reporting preserve the resident's meaning without the aide diagnosing or guessing.

32. Correct: A - Clarify and follow the resident's current request

Preferences can change. A respectful clarification and response to the present request support autonomy and privacy.

33. Correct: A - Remove pressure from the area as allowed and report the skin change

Redness beneath a device can signal pressure-related skin injury. Early pressure relief within the care plan and prompt reporting help prevent worsening damage.

34. Correct: D - Clean the approved removable parts, rinse them, and allow them to dry according to facility procedure

Residue around a valve can harbor microorganisms and interfere with function. Safe disassembly, cleaning, rinsing, and drying should follow the approved procedure.

35. Correct: A - Correct the kink or obtain functioning equipment before measuring

Kinked tubing can interfere with cuff inflation and produce an unreliable reading. The aide should correct the equipment problem before measuring and never invent a value.

36. Correct: C - Refuse to attest to an unobserved skill and report the request through the proper process

Signing would create a false record and could conceal unsafe performance. Documentation must reflect only what the signer actually knows or observed.

37. Correct: A - Acknowledge the frustration and offer the least assistance needed while preserving the resident's choices

Supportive assistance can help the resident succeed without taking control away. Dismissive statements or unauthorized changes to the device undermine dignity and independence.

38. Correct: D - Keep the labeled bottles arranged as planned and allow the resident to select the product

Tactile labels let the resident identify personal products independently. Removing the labels or combining products takes away both safe identification and choice.

39. Correct: B - Explain the role limit and report the resident's request to the nurse

Cutting or chemically treating a foot callus is not routine aide grooming and can cause tissue injury. The request should be referred to the nurse for appropriate follow-up.

40. Correct: C - Refuse and report the attempted personal use of the resident's benefits

Reward points linked to the resident's account are the resident's property and benefit. Using them for a staff member is exploitation even when no cash changes hands.

41. Correct: C - Stop using the water and report the change before obtaining an approved safe water source

Discolored water may not be safe for resident hygiene. Soap, settling, or intact skin does not make an unapproved water source acceptable.

42. Correct: D - Communicate the preference and help coordinate a safe room arrangement

A resident may request reasonable personalization of living space. The team should honor the preference when the arrangement keeps equipment, walking paths, and exits safe.

43. Correct: B - Reposition the tongue smoothly and check comfort before walking

Folded material can create pressure, pain, and unsafe footing. Correcting the fit before walking helps protect the skin and reduce fall risk.

44. Correct: B - Report the sudden change promptly to the nurse

Sudden hearing loss is a new change requiring prompt assessment. The aide should not insert objects or liquids into the ear.

45. Correct: B - Keep residents away from the unsafe door and report it for immediate attention

A fast-closing door can strike or trap a person. Restricting access and reporting the malfunction protects residents while qualified personnel address it.

46. Correct: D - Keep the approved control available and encourage the resident to operate it

Environmental controls can preserve independence and choice. Moving or disconnecting the control creates unnecessary dependence.

47. Correct: B - Help with the chosen socks and respect the resident's harmless style preference

Residents may make personal clothing choices when the items fit safely. Staff preference for matching colors is not a reason to override the resident.

48. Correct: B - Keep the tooth undisturbed, stop hard food, and report the change promptly

A newly loose tooth can be injured further or become a choking risk. The aide should not pull, wiggle, or test it and should report the change promptly.

49. Correct: A - Keep the resident away from the affected area and report the environmental hazard promptly

Water damage with possible growth requires environmental assessment and controlled cleanup. Dry scraping or covering the area can spread material or prolong exposure.

50. Correct: C - Protect the skin, offer a napkin, and honor the resident's preference to change after eating if safe

The resident may choose when to change if there is no immediate safety concern. Protecting the skin and honoring the request balance comfort, dignity, and autonomy.

51. Correct: C - Place the resident safely, stop using the faulty function, and report the bed for repair

A drifting bed can change positioning unexpectedly and create injury risk. The aide should secure the resident in a safe position and remove the faulty function from use.

52. Correct: B - Position the approved plate guard and allow the resident time to eat independently

The plate guard is an adaptive device that allows the resident to use existing abilities. Unnecessary feeding takes away independence.

53. Correct: C - Observe relevant details and report the new change to the nurse

A new tremor is a change in condition. The aide should report objective observations rather than diagnose the cause or restrain the hands.

54. Correct: D - Remove the scented item, offer clean fragrance-free clothing, and report the itching

Removing the likely irritant supports comfort, while reporting allows the skin complaint to be evaluated. Adding fragrance or applying it to irritated skin may worsen the problem.

55. Correct: A - Do not use it; contain it according to policy and obtain an intact pack

A leaking pack can expose skin to gel and cannot deliver cold therapy safely. It should be handled according to policy and replaced.

56. Correct: A - Obtain and honor the resident's permission about displaying and identifying the artwork

The painting and the resident's identity should not be displayed publicly without consent. Permission should cover both the display and how the resident is identified.

57. Correct: C - Stay with the resident and summon immediate nursing or emergency help according to policy

Bluish lips with faster breathing can signal inadequate oxygenation and require an immediate response. The resident should not be left alone or asked to exercise.

58. Correct: A - Obtain a clean container with legible markings before measuring

Unreadable graduations cannot produce an accurate output value. Guessing, copying an old result, or drawing unofficial markings would create false data.

59. Correct: B - Read all listed choices accurately and allow the resident to decide

Reading the complete schedule provides equal access to information while preserving the resident's decision. The aide or roommate should not limit or make the choice.

60. Correct: B - Use soap and warm water, rinse well, and dry the hands, including between the fingers

Thorough washing removes soil and microorganisms, and careful drying reduces moisture-related skin problems. Very hot water can injure skin.

61. Correct: C - Stay in communication and summon help using the facility's emergency-entry procedure

Remaining in contact reassures the resident and allows the aide to detect a change while trained help opens the door safely. Climbing or forceful improvisation can cause injury.

62. Correct: A - Protect confidentiality and use only the facility's approved private communication method

A publicly visible name linked to a toileting schedule reveals private care information. Staff must use an approved method that limits information to those who need it.

63. Correct: D - Allow the safe, purposeful activity and offer encouragement

A familiar, harmless task can provide comfort, purpose, and engagement for a person with dementia. There is no need to correct or remove a safe activity.

64. Correct: C - Make the key turner accessible and allow the resident to use it

The approved device supports control of personal property and preserves hand function. Staff should not create dependence by taking over the task.

65. Correct: B - Report the gap and communicate only verified information through the proper handoff process

Intake records must be based on known measurements, not estimates or copied totals. Reporting the gap lets the team address incomplete information safely.

66. Correct: D - Respect the preference and ask how the resident would like staff to communicate

Eye-contact expectations vary among individuals and cultures. Asking and adapting demonstrates respect without making assumptions.

67. Correct: A - Use the approved divided plate and arrange the meal as requested within the diet plan

A divided plate can support a harmless personal preference while the prescribed diet remains unchanged. Ridiculing or ignoring the preference is disrespectful.

68. Correct: D - Offer safe, dry footwear and allow the slippers to dry completely according to their care instructions

Damp footwear can chill the feet, irritate skin, and increase slipping. Safe dry footwear should be used until the slippers are completely dry.

69. Correct: B - Stop the transfer, keep the resident safe, call for help, and report the change

Sudden inability to bear weight makes the planned transfer unsafe. The aide should not force or improvise the movement and must report the new weakness.

70. Correct: B - Guide it gently and use a clean section as the floss moves from one tooth space to another

Gentle technique reduces gum injury, and changing to a clean section limits movement of debris between tooth spaces. Floss should not be forced into the gums.
